

**Abstract****4-DIMENSIONAL GRAY NEUTRALITY CALIBRATION**

5           A method of applying a gray neutrality calibration to a color signal, said  
method comprising: representing said color signal as a position in a multi  
dimensional color space, in which each said dimension of said color space  
represents a respective primary color; defining a gray axis in said multi  
dimensional color space as a set of coordinates for which a plurality of said  
10 primary colors each have a same value as each other; determining a distance  
between said position representing said color signal and said gray axis; and using  
said determined distance between said color signal position and said gray axis to  
apply a gray neutrality correction to said input color signal.
